

RUN AS... ENDPOINT PROTECTION

Gartner Visionary 2018

senhasegura.go performs the control of the privilege elevation in endpoints, which permits the execution of applications or tasks that need administrative privilege in a punctual form.

Invocation flow of administrative privileges

AUDIT AND CONTROL

DATA THEFT

Segregate the access to sensible information, isolate critical environments and correlate events to identify any suspect behavior and avoid the data theft.

AUDIT AND SESSION LOG

All the demands to utilize the administrative credentials are registered in video and session logs, which results in better traceability of the users and higher easiness to audit.

PRIVILEGE ABUSE

Manage and keep the credentials of the social networks of your company protected against undue publications and users with bad intentions.

PCI, ISO, SOX, GDPR

Overcome the challenges to implant regulatory controls with the automation of privileged accesses and obtain maturity in the audited processes.

FUNCTIONS

APPLICATIONS

Manage and keep the credentials of the social networks of your company protected against undue publications and users with bad intentions.

CONTROL PANEL

Manage and keep the credentials of the social networks of your company protected against undue publications and users with bad intentions.

NETWORK SHARING

Invocation of administrative privileges to access directories. Security for the files and directories against ransomware.

AUTOMATION MACROS

Execution of applications using macros predefined by the account administrator.
