

# RADIUS-as-a-Service

Set up your RADIUS server in a single click. It's that easy.

## Cloud-based RADIUS server & authentication.

Securing your network will always be a priority – no doubt one of many priorities your IT team is faced with – but it doesn't need to be a drain on time and resources.

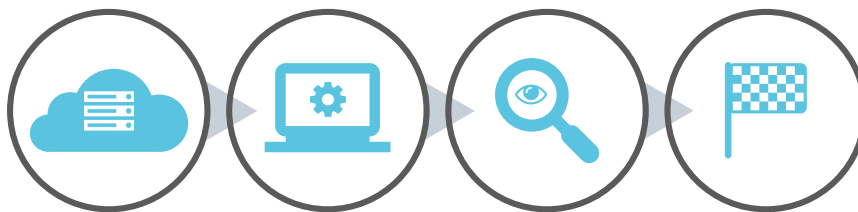

With Portnox's RADIUS-as-a-Service solution, companies can now efficiently and affordably authenticate to wifi, VPN, switches and network devices, while simplifying administration and enabling long-term scalability.

## Get set-up in minutes.

Tired of all the heavy lifting when it comes to standing up RADIUS servers? We feel your pain, that's why we're making it easier than ever to securely authenticate and control wired and wireless network access for all your users and devices.

## How it works.

We're not kidding, it really is this easy...

Set-up your own RADIUS tenant with one click, directly in the platform.

Configure your SSID to work with your RADIUS server.

Set wifi & wired authentication using your directory or certificate.

DONE... and on to the next IT project.

## Simple & secure.

### Rapid Deployment

No need to worry about pre-set infrastructure or lengthy training.

### Seamless Authentication

Integrate with your directory (Okta, AzureAD, etc.). Includes built-in Certificate Authority, or works with your own.

### Device Visibility & Accountability

See all devices on your network - no matter type or location.

### Zero-Touch Management

With a cloud-based RADIUS server & no on-premise hardware of software, say goodbye to on-going maintenance.

### Flexible Access Controls

Use device posture assessment to drive your policy with Dynamic VLAN or ACL assignments.

### No Vendor Lock-In

Portnox works with any wired or wireless infrastructure.

### Vendor Agnostic

Enjoy built-in connectors to common directories, like AzureAD, Okta, GSuite & more.

### SOC-Certified

Portnox is SOC II Type II certified, with data encryption in motion or at rest.
