Who is CANVIA?

CANVIA is a company that, for more than 35 years, has been leading the innovation and digital transformation processes in organizations in different sectors of Peru. In addition, they are part of the portfolio of Advent International, one of the largest private equity funds in the world.

Their purpose is simple: to make people's lives easier, innovating and implementing the digital transformation projects of their clients safely and in an agile way with specific business results.

To that end, they bring together a wide portfolio of solutions and services that are integrated with the most advanced technologies such as Cybersecurity, Big Data Analytics, Artificial Intelligence or Automation, among others. All of this with the aim of walking together with their clients on the path to digital transformation.

Given the high prospects that are associated with their services, the level at which they work and the responsibility they present to their clients, CANVIA needed to find a tool that would allow them to have control over the extensive inventory of their equipment, especially one that had good alert handling.

“We did an exhaustive market research and, yes, in CANVIA we have had other monitoring software, but it did not meet our expectations. Finally it was Pandora FMS and its simple management at administration level that won us over”

Julia Donayre Escajadillo - Technology Services Supervisor at CANVIA

And not only the intuitive tool's handling. Its Linux-based solution, the practical scalability and the freedom that one has when creating modules, were essential features for CANVIA to decide on Pandora FMS, among all the monitoring tools on the market.

Regarding the implementation of Pandora FMS on CANVIA, Julia explains:

“ We started with the Community version, and at the beginning, mainly due to lack of experience with the tool, we had several problems when configuring. We did not have support and we had to use the information from the community forums. But later on, when we acquired the Enterprise version, everything flowed with ease and speed, in due order. ”

Now CANVIA and its infrastructure monitor more than 3,000 computers with **Pandora FMS** , among which there are: servers, communication equipment, logs, APP/DB-based systems, SAP, VMWare and other inventory, finally unified and monitored by the company thanks to a single software.

“Pandora FMS allows multiple platforms to be monitored, as well as monitoring and executing specific scripts for some clients. In addition it has allowed us to offer an efficient tool both regarding costs and benefits. Not to mention its licensing format and the support in our language, which is the best. They are always there to help us with some configurations that do not come by default.”

Thanks to Pandora FMS, CANVIA has gone **from having multiple platforms for their equipment to centralizing everything in just one console.** They have improved the control of the management of the console in case of failures, and have also been able to update their monitoring policies faster and even reduce operating costs.

“To those of you who have not yet decided to implement Pandora FMS in your businesses, dare to take the step, since it is an efficient tool whose capabilities are constantly growing.”

Julia Donayre Escajadillo - Technology Services Supervisor at CANVIA

Pandora FMS is the perfect monitoring suite for demanding organizations, of any size, that value professional support, steady updates and, above all, a day-to-day oriented product, with out-of-the-box solutions and large environment management-oriented. In addition, Pandora FMS gives you the flexibility to adjust your license to the rhythm of your operations.
